

Diucaps

All Natural, Safe & Effective

EACH CAPSULE CONTAINS: L-PHENYLALANINE 300 MG., VITAMIN C 100 MG., PYRIDOXINE (B6) 25 MG. AND PANTOTHENIC ACID (B5) 50 MG.

Control Night
Time Binging
Curb Head Hunger
Mood lifter
Curb Cravings
Improve
Concentration
CURB Appetite

Great for Teens, Adolescents, Individuals Unable to take Controlled Drugs

From Practical Scientific Approach: L-Phenylalanine, an essential nutrient amino acid can inhibit appetite by increasing the brain's production of the neurotransmitter NE (norepinephrine). Phenylalanine also causes the brain to release the hormone CCK (cholecystokinin) which has been shown to inhibit eating. Current appetite suppressant drugs on the market make claims to reduce appetite, but are usually stimulants that are effective for only a few weeks and often have undesirable behavioral side effects.

L-phenylalanine: Turns into a neurotransmitter in the brain. These neurotransmitters provide feelings of joy, ambition and alertness*. L-phenylalanine has also been used in cases of depression and sometimes replacing anti-depressants successfully.

Vitamin C and B6: Required for the conversion of phenylalanine to NE by the brain, it maintains the protein collagen and gives strength to blood vessels. It's also an antioxidant.

Vitamin B6 Pyridoxine: Contributes to the formula as a natural diuretic and mood stabilizer*. It also helps to metabolize fats and carbohydrates. B6 helps maintain the balance of sodium and potassium which regulates body fluids.

Vitamin B5 Pantothenic Acid: The essential part of coenzyme A, which is required for cellular metabolism. It releases energy from carbohydrates, fats and proteins. As a coenzyme, it helps in the utilization of other vitamins. It also may improve the body's ability to withstand stressful conditions and aid in the prevention of premature aging and wrinkles.

May Benefit the Following Conditions

- Inhibit appetite*
- Regulate mood*
- Curb cravings, head hunger*
- Control binge & night time eating*
- Enhance mental focus*
